

Contents

CD-ROM Contents	vi
Using These Activities	vii
Chart of Activities	xii
1: Distributions of Data	
Variation in Measurement—Tennis Balls	3
Variation in Estimates—Meters vs. Feet	7
Exploring Graphs—CensusAtSchool	11
Summary Measures—CensusAtSchool	17
Box Plots and Transformations—CensusAtSchool	25
Deviation from the Mean—Hand Spans	33
Exploring the Normal Distribution	37
2: Relationships Between Data	
Least Squares Lines—Pinching Pages	45
Least-Squares Lines and Correlation—Was Leonardo Correct?	51
Exploring Correlation	55
Creating Error	61
Nonlinear Transformations—Equilateral Triangles	69
Modeling Data—Copper Flippers	75
3: Collecting Data	
Importing Data—U.S. Census	83
Sampling Bias—Time in the Hospital	89
Choosing a Representative Sample—Random Rectangles	95
Randomization in Experiment Design	99
Designing an Experiment, Part 1—Bears in Space	105
Designing an Experiment, Part 2—Block Those Bears	113
Comparing Experiment Designs—Sit or Stand	117
4: Sampling Distributions	
Introduction to Sampling Distributions—Random Rectangles	127
Sampling Distributions of the Sample Mean—Pocket Pennies	135
Sampling Distributions of the Sample Proportion—Seat Belts	141
Sampling Distributions of the Sample Sum and Difference—Dice Rolls	147
Using Sampling Distributions—By Chance or By Design?	153

5: Probability

Constructing a Probability Model—Spinning Pennies	161
The Law of Large Numbers	165
Addition Rule—Scottish Children	173
Establishing Independence with Data	179
Exploring Sampling—With or Without Replacement	185
Binomial Distributions—Can People Identify the Tap Water?	193
Geometric Distributions—Waiting-Time Problems	199
Geometric Distributions: Expected Value	205
Transformations and Simulation Explorations	209

6: Inference for Means and Proportions

Reasonably Likely Values and Confidence Intervals	217
Confidence Interval for a Proportion—Capture Rate	225
Significance Test for a Mean—Body Temperature	231
Significance Test for a Mean: Types of Errors	239
Confidence Interval for a Mean: σ Unknown—SAT Scores	245
Confidence Interval for a Mean: Not Normal—Brain Weights	251
Significance Test for a Proportion—Spinning and Flipping Pennies	259
Inference Between Two Proportions—Plain and Peanut M&M's	267
Inference for the Difference of Two Means: Unpaired—Orbital Express	275
Inference for the Difference of Two Means: Paired—Hand Spans	283

7: Chi-Square Tests

Measuring Fairness—Constructivist Dice	291
Chi-Square Goodness-of-Fit Test—Plain M&M's	297
Chi-Square Test of Independence	305

8: Inference for Regression

Sampling Distribution of the Slope—How Fast Do Kids Grow?	315
Variation in the Slope	321
Inference for a Slope—How Tall Are You Kneeling?	327
